

Rebar Straightening and Cutting Machine

This robust machine is designed for straightening and cutting reinforcing bars (rebar). It features a heavy-duty frame, a straightening mechanism with adjustable rollers, and a cutting system for precise length control.

Overview

Professional Rebar Preparation

This robust machine is engineered for the high-precision straightening and cutting of reinforcing bars. Featuring a heavy-duty frame and adjustable roller mechanisms, it ensures consistent results for both construction sites and large-scale processing plants. The intuitive control panel allows operators to fine-tune cutting length and speed for maximum efficiency and material control.

Technical Features

Key Functional Features

- Heavy-duty industrial frame
- Adjustable straightening rollers
- Precise cutting system
- Integrated control panel for parameter adjustment

Control Capabilities

Cutting Length Control, Speed Adjustment

Certifications

Quality Standards

HEAT TREATMENT

Applications

Suitable Environments

- Construction Sites
- Rebar Processing Plants
