

Rechargeable LCD and One-Way Transmitter System

This system includes a rechargeable LCD transmitter and a one-way transmitter. It is designed for remote control applications, providing both visual feedback and simple control options.

Overview

Professional Remote Control System

This advanced remote control system features a rechargeable LCD transmitter alongside a standard one-way transmitter, offering versatile control options for various applications. Designed for reliability and ease of use, the system includes a main control unit, a siren, and a complete wiring harness for seamless installation. The inclusion of an LCD interface provides critical visual feedback, enhancing operational convenience for professional users.
