

Rechargeable NiCd Batteries

These are rechargeable nickel-cadmium (NiCd) batteries with a voltage of 1.2V. They are available in different capacities, including 300mAh, 800mAh, 1000mAh, 1600mAh, and 5000mAh.

Product Overview

Reliable Nickel-Cadmium Power Solutions

These rechargeable Nickel-Cadmium (NiCd) batteries are designed for consistent, long-term performance in demanding industrial and commercial applications. With a standard voltage of 1.2V, they provide a stable power source suitable for a wide range of devices. Available in multiple capacities, these cells support standard charging protocols to ensure longevity and reliability in your operational equipment.

Technical Specifications

Available Capacities

- 300mAh
- 800mAh
- 1000mAh
- 1600mAh
- 5000mAh

Nominal Voltage	1.2 V
Standard Charging Time	16 hours

Performance Metrics

Capacity & Energy Examples

300 mAh
Capacity

360 mWh
Energy

30 mA
Standard Charge Current

High Capacity Example

1600 mAh
Capacity

1920 mWh
Energy

160 mA
Standard Charge Current

Product Features

Chemistry Type

NiCd • Rechargeable
