

Reciprocating Gasoline Transfer Pump

This reciprocating pump is designed for pumping gasoline and similar fluids. It features a robust construction with a heavy-duty frame and multiple pistons for efficient operation.

Product Overview

High-Efficiency Reciprocating Gasoline Transfer Pump

This reciprocating pump is engineered specifically for the reliable transfer of gasoline and similar volatile fluids. Built with a robust, heavy-duty frame and multiple pistons, it ensures consistent and efficient operation even in demanding industrial environments. The system incorporates integrated safety mechanisms, including pressure relief valves and flame arrestors, to maintain operational security in hazardous conditions.

Technical Specifications

Pump Type	Reciprocating
Drive Method	Belt-driven with adjustable pulleys

Safety & Compliance

Safety Features	Pressure Relief Valve, Flame Arrestor
-----------------	---------------------------------------

Construction

Construction Material	Corrosion-resistant materials
-----------------------	-------------------------------

Applications

Suitable Applications

- Fuel transfer
- Dispensing operations
- Industrial processes
