

Reclaimed Rubber Cutting Machine

This rotating-disc cutting machine is designed for processing reclaimed rubber. It cuts rubber blocks into smaller pieces such as slices, granules, and bars.

Overview

Professional Rubber Cutting Solution

This high-performance rotating-disc cutting machine is engineered to process natural, synthetic, reclaimed, and compound rubber materials efficiently. It offers versatile cutting capabilities, allowing rubber blocks to be transformed into smaller blocks, slices, granules, or bars. Built with a robust hydraulic system for consistent performance, it is an essential component for modern industrial rubber and plastic processing facilities.

Technical Specifications

The horizontal hydraulic design ensures consistent and powerful rubber processing.

Model Specifications

Feature	WQJ-1000	WQJ-1300
Blade Diameter	1000mm	1300mm
Production Capacity	2t/h	3t/h
Rotational Speed	50r/min	50r/min
Power Rating	4+2.2kw	4+2.2kw
Working Pressure	5Mpa	5Mpa

Compatible Materials

Natural Rubber, Reclaimed Rubber, Compound Rubber, Synthetic Rubber, Plastic

Operational Features

Highlighted components including the cutting guide plate, water box, and control system.

Key Operational Features

- Rotating-disc cutting mechanism for precision
- Hydraulic control system for powerful, consistent operation
- Self-lubricating moving parts to reduce friction and maintenance
- Integrated water box for cooling and lubrication
- Includes cutting guide plate and pushing plate for controlled feed

Support and Maintenance

The equipment is delivered as a complete unit for easy installation via electrical connection and ground fixing. It includes a one-year warranty on the main machine structure and equipment, with technical support available for equipment selection and operational training.
