

Recordable Sound Module for Postcards

This recordable sound module is designed for integration into postcards and other mini recording applications. It features a compact design with integrated buttons for recording and playback, a microphone for sound input, and a speaker for audio output.

Product Overview

Compact Recordable Sound Solution

This recordable sound module is engineered for seamless integration into promotional materials such as postcards, greeting cards, and various toys. It features an intuitive two-button interface designed for effortless recording and playback functionality. With a customizable PCB layout, this module offers flexible application possibilities for custom projects requiring integrated audio capabilities.
