

Recycled Petroleum Equipment Components

These are recycled components from petroleum equipment. The bulk of materials includes polycarbonate injection molding sprues and compact discs.

Product Overview

Sustainable Petroleum Components

These recycled petroleum equipment components offer a sustainable material solution for industrial applications. Comprised of high-quality polycarbonate injection molding sprues and compact disc materials, these components are suitable for various re-use or recycling processes. This bulk material is ideal for manufacturers looking to integrate recycled content into their supply chain.

Material Composition

Material Types	Polycarbonate, Injection Molding Sprues, Recycled Compact Discs
Appearance	Translucent and white

Logistics

Packaging	Large industrial bulk bag
Production Date Stamp	2006-03-24
