

Reducing Tee Pipe Fitting

This pipe fitting connects three pipes, with a branch of smaller diameter than the run. It reduces flow rate or pressure in fluid or gas transportation systems.

Product Overview

Professional Reducing Tee Fitting

The reducing tee is a specialized pipe fitting designed to connect three pipes where the branch connection is smaller than the run pipes. This component is essential in piping systems for managing fluid or gas flow rates and pressure distribution. Engineered for performance, this fitting ensures a reliable, leak-proof connection capable of withstanding demanding temperature and pressure environments.

Technical Specifications

Fitting Classification

Reducing Tee • Tees

Available Materials

Carbon Steel, Stainless Steel, Alloy Steel
