

# Reflecting Telescope with Equatorial Mount

This optical instrument is a reflecting telescope mounted on a tripod. It is equipped with an equatorial mount, allowing for precise tracking of celestial objects as they move across the sky.

## Overview

### Precision Astronomical Observation

This reflecting telescope is designed for high-quality celestial observation, providing stable and precise performance. Equipped with a professional-grade equatorial mount, it enables smooth tracking of celestial objects throughout their arc in the night sky. The durable tripod base ensures reduced vibration for a clearer viewing experience, making it an excellent choice for serious astronomy enthusiasts.

## Technical Specifications

### Stability System

Stable Tripod Base • Precision Tracking

Mounting System	Equatorial Mount
Optical Design	Reflector
Key Features	Equatorial Mount, Finder Scope, Tripod Included, Celestial Tracking
