

# Refrigerant Gas

Refrigerant gas is used in various cooling applications. Different types such as R134a and 410A are available for specific refrigeration needs.

## ADDITIONAL IMAGES

## Product Overview

### Professional Refrigerant Solutions

This high-quality refrigerant gas is engineered for professional use in HVAC and refrigeration systems. It offers reliable thermal performance as a non-flammable liquefied gas, ensuring safe and efficient operation. Our range includes multiple industry-standard variants such as R134a and R410A to meet diverse cooling requirements.

## Technical Specifications

### Compliance and Safety

GB/T18826-2016 • UN3159 • UN3163 • Non-Flammable

### Available Refrigerant Types

R134a, R410A, R404A, R407C, R507, R125, R32, R143a

## Product Details

### Cylinder Configuration

Refrigerant	Net Weight	CAS Number
R134a	13.6 kg	811-97-2
R410A	11.3 kg	75-10-5 / 354-33-6

## Handling and Storage

### Handling Guidelines

- Non-reusable cylinder design
- Non-refillable valve system
- Avoid direct sunshine exposure
- R410A requires inverted position for liquid withdrawal
- Professional use only
