

Refrigeration Equipment Control Cabinet with Dual Digital Display

This electric control cabinet is designed for refrigeration equipment. It features dual digital displays for temperature monitoring and control, along with indicators for operational status.

Product Overview

Professional Refrigeration Control

This refrigeration equipment control cabinet offers precise temperature management through a dual digital display system. Designed for stability and reliability, it provides independent control over compressor, defrosting, and fan operations. Featuring adjustable startup delays and intelligent sensor fault handling, it ensures optimal performance for professional cooling applications.

Technical Specifications

Model Number	ECB-5080S
Controller Model	MTC-5060
Sensor Configuration	Dual temperature sensors

Control Features

Controlled Components

- Compressor
- Defroster
- Fan

Safety & Logic

- Adjustable compressor startup delay
- Proportional compressor startup/shutdown on sensor fault

Operational Modes

Manual, Automatic, Rotary Switch Control

Display & Monitoring

Real-time Monitoring

2 count

Digital Displays

Status Indicators

Power • Cooling • Defrosting • Fan Operation • Fault Status
