

Refrigeration System Piston

This cylindrical piston is a component used in refrigeration equipment. It is made of a dark gray material and features a raised cylindrical protrusion on its top surface.

Product Overview

High-Performance Refrigeration Piston

This precision-engineered piston is designed specifically for use in refrigerator compressor systems. Crafted from durable materials, it ensures reliable compression cycles and efficient thermal management within cooling units. Its robust construction makes it an essential component for maintaining optimal refrigeration performance in industrial and commercial appliances.

Technical Details

Material Finish

Dark Gray Finish • Industrial Grade

Primary Application

Refrigerator Compressor

Component Category

Piston
