

Refrigerator Control Interface Module

This specialized component is designed for refrigerators and refrigeration equipment. The circular device features a central red indicator and multiple connection points for managing and monitoring the refrigeration process to ensure optimal performance and temperature control.

Product Overview

Precision Refrigeration Control

The DG-XWD04 is a specialized interface module engineered specifically for refrigerator systems. Designed for durability, this component serves as a critical link in managing and monitoring the refrigeration process to ensure consistent temperature regulation. Its robust construction makes it suitable for the demanding operational environments typical of professional refrigeration equipment.

Technical Specifications

Design Features

- Circular form factor
- Centralized status indicator (Red)
- Integrated cabling system
- Multi-point connection interface

Model Identifier	DG-XWD04
Primary Application	Refrigeration Equipment, Control Interface, Temperature Management
