

Reinforced PVC Garden Hose

This garden hose is constructed from transparent PVC and reinforced with high-strength braided polyester fibers. It is suitable for gardening, irrigation, and general water transfer applications, with a temperature range of -5°C to +60°C and a burst pressure of 20 bar.

Product Overview

Reinforced PVC Garden Hose

This high-performance PVC garden hose is engineered with high-strength braided polyester fibers for superior durability and structural integrity. Featuring a smooth inner layer for optimal flow and a robust outer shell, it is specifically designed to resist abrasion, UV rays, and chemical exposure. It serves as a versatile solution for professional gardening, irrigation, and general water transfer applications.

Technical Specifications

Burst Pressure

20 bar

Burst Pressure

Operating Temperature

-5°C to +60°C

Construction & Materials

Reinforcement Material

Braided polyester fibers

Key Features

UV Resistant, Chemical Resistant, Abrasion Resistant, High-Flow Smooth Interior

Applications

Suitable Applications

- Gardening
- Irrigation
- General Water Transfer
