

Reinforced PVC Water Hose

Flexible PVC hose pipe is reinforced with high-strength polyester braiding. It features a smooth inner bore for optimal flow and a durable outer layer for abrasion resistance, making it suitable for various applications including gardening, irrigation, and water transfer.

Product Overview

Reinforced PVC Water Hose

This reinforced PVC hose is engineered for high-performance fluid transfer in a variety of industrial and agricultural settings. Featuring high-strength polyester braiding, it offers excellent durability and pressure resistance while maintaining high flexibility. The smooth inner bore minimizes friction for optimal flow, and the robust outer layer is specially designed for superior abrasion resistance.

Technical Specifications

Key Features

- High-strength polyester reinforcement
- Smooth inner bore for optimal flow
- Abrasion-resistant outer layer
- High flexibility
- Compatible with standard fittings

Material Composition

PVC, Polyester Braiding

Applications

Typical Applications

Gardening, Irrigation, Water Transfer
