

Relief Offset Printing Press for Woven Sacks

This machine prints letters, figures, and trademarks on plastic woven bags using two- or three-color chromatography. It features automatic counting, fine tuning, and automatic printing with photocell control.

Product Overview

Industrial Printing Performance

The Relief Offset Printing Press is engineered specifically for high-quality printing on plastic woven bags. Featuring advanced two- or three-color chromatography, it ensures precise reproduction of letters, figures, and trademarks. The assembly is equipped with automated systems including photocell control for registration, automatic counting, and flashed fine-tuning for consistent, professional output.

Technical Capabilities

Capabilities

2-3 Color Chromatography, Photocell Control, Automatic Counting, Flashed Fine-Tuning

Design and Construction

Design Features

- Robust grey metal housing
- Large infeed table for efficient material handling
- Multi-roller ink distribution system
- Integrated control panels for operational adjustments

Application

Compatible Materials

- Plastic woven bags
- PP woven sacks
