

# Remote Control Valve with Brass Body

This is a remote control valve designed for efficient flow management. It features a durable brass body and includes threaded connections for versatile installation.

## Product Overview

### High-Quality Remote Control Valve

This remote control valve is engineered with a durable brass body, ensuring long-term reliability for demanding industrial applications. The design incorporates dual copper pipes for efficient fluid flow and includes multiple connection types for versatile installation. Compact and robust, it is an ideal component for precision control systems requiring high-quality build materials.

## Technical Dimensions

## Technical Specifications

### Materials

- Brass Body
- Copper Pipes

### Quality Standard

High Quality

### Available Connections

M40x1.5, G1/2, G3/8
