

Remote Controlled Advertising Airship

This remote-controlled airship is designed for surveillance, advertising, and aerial photography. It features a durable envelope, an efficient propulsion system, and stable flight characteristics.

Product Overview

Professional Aerial Platform

This high-performance remote-controlled airship is engineered for versatile professional applications, including large-scale advertising, surveillance, and aerial photography. Featuring a durable, aerodynamically efficient envelope and a stable propulsion system, it ensures reliable operation in diverse environmental conditions. The advanced remote control system enables precise maneuvering, providing professionals with a reliable platform for extended flight missions.

Technical Specifications

Operational Capabilities

- Durable envelope construction
- High-efficiency propulsion system
- Stable flight characteristics
- Precise remote maneuvering control
- Extended flight time capability

Payload Options

- High-resolution cameras
- Specialized sensor equipment
- Communication hardware

Operational Safety

Reliable in diverse conditions • Safety-tested design

Primary Applications

Advertising, Surveillance, Aerial Photography
