

Remote Controlled Rotating TV Antenna

This remote controlled rotating TV antenna is designed for optimal TV signal reception. Its motorized rotation mechanism allows users to adjust the antenna direction for the best possible signal strength.

Product Overview

Professional Signal Reception Solution

This remote-controlled rotating TV antenna is designed to provide high-gain, clear reception for both VHF and UHF frequency bands. Featuring a motorized 360-degree rotation system, it allows users to optimize signal strength remotely, making it an excellent choice for areas with inconsistent coverage. Its solid, rain-proof construction ensures long-lasting performance in outdoor environments while remaining easy to install.

Technical Specifications

Signal Enhancements

- Built-in signal booster
- High gain amplification
- Low noise technology

Frequency Bands	VHF, UHF
Rotation Range	360 degrees (Full-direction)

Control & Operation

Control Interfaces

- Infrared remote control
- Electrical control rotation

Design & Durability

Construction Details

Rain-proof • Solid structure • Easy installation
