

Remote Controlled TV Antenna

This high-gain, directional antenna is designed for optimal reception of television signals. It uses a combination of Yagi-Uda elements for VHF and UHF bands, along with a reflector screen to enhance signal strength and minimize interference.

Product Overview

High-Performance Signal Reception

The DT-880C is a high-gain, directional antenna engineered for optimal television signal reception. It utilizes a sophisticated combination of Yagi-Uda elements for both VHF and UHF bands, paired with a reflector screen to significantly enhance signal strength while minimizing interference. Designed for user convenience, the system includes a remote control and receiver box, allowing for precise aiming and fine-tuning to ensure the best possible picture quality.

Technical Specifications

Antenna Design	Directional Yagi-Uda
Supported Frequency Bands	VHF, UHF

Features

Control Method	Remote Controlled
