

Residential Air Source Heat Pump for Heating and Cooling

This residential air source heat pump features a compact, modern design and a user-friendly control panel. It uses an environmentally friendly refrigerant and air as a heating source to supply hot water.

Overview

High-Efficiency Residential Air Source Heat Pump

This residential air source heat pump is an energy-saving solution designed for both heating and cooling applications, capable of supplying domestic hot water over 50°C. Featuring a compact and modern design with built-in circulating pumps, the system utilizes environment-friendly refrigerants to extract heat from outside air, even in colder temperatures. It is engineered for quiet operation, easy installation, and low maintenance, making it a reliable and cost-effective choice for year-round home comfort.
