

Residential Flue Exhaust Gas Water Heater

This is a flue exhaust gas water heater. It is designed for efficient and reliable hot water supply.

Overview

Residential Flue Exhaust Gas Water Heater

This residential flue exhaust gas water heater is designed to provide a reliable and efficient hot water supply. It features advanced safety mechanisms, including protection against overheating, overpressure, and flameout, ensuring peace of mind for homeowners. With user-friendly controls like an LED display and a summer-winter switch, this unit combines modern convenience with robust construction.

Key Features

Core Components

- Copper water valve
- Double ignition pin
- Big solenoid valve
- Large burner row

Safety & Protection

Safety Mechanisms

Overvoltage Protection, Over-water Pressure Protection, Overheating Protection, Down-draught Protection, Flameout Protection, Frozen Protection, Flue-blocked Sensor
