

Residential Gas Water Heater with Digital Display

This gas water heater is designed for residential use. It features a digital display showing the current water temperature and multiple function buttons for adjusting settings and operating modes.

Product Overview

Smart Residential Heating Solution

The QH1502 series residential gas water heater offers advanced temperature control and efficiency for modern households. Featuring a digital interface, it allows users to customize water volume and temperature, including a convenient bathtub filling function that automatically shuts off once the desired level is reached. With built-in micro-computer self-inspection and dual auto-adjustment for water and gas, this unit ensures both safety and consistent performance.

Technical Specifications

Economic Mode

40 °C

Target Temperature

4 L/min
