

Residential Heat Pump System

This heat pump is designed for efficient heating and cooling. It features a compact outdoor unit and a sleek, modern indoor unit.

Product Overview

Residential Heat Pump Solution

This split-type heat pump system is engineered for efficient residential heating and cooling. With a 150L capacity and advanced compressor technology, it delivers reliable performance while maintaining energy efficiency. The unit utilizes environmentally friendly R134a refrigerant and features a design where the coil is wrapped around the external of the inner tank for enhanced safety and heat transfer.

Technical Specifications

Capacity	150 L
Refrigerant	R134a
System Configuration	Split type

Features & Safety

Protection Systems	Multiple Protections, External Coil Design
Operating Range	Wide operating range
