

Residential Heating Circulation Pump

High-efficiency circulating pump designed for residential heating and cooling systems. It features a multi-speed motor for optimized performance and energy savings.

Overview

High-Efficiency Circulation Pump

This high-efficiency circulating pump is engineered specifically for residential heating and cooling systems. It features a versatile multi-speed motor designed to optimize performance while ensuring significant energy savings. Built for reliability in closed-loop systems, it offers adjustable flow and head pressure to meet precise system requirements.

Technical Specifications

Key Performance Metrics

46 L/min

Max Flow

6 m

Max Head

Voltage/Frequency	230V-50Hz
Power Consumption	3 W

Certifications & Compliance

Certifications	CE, ISO 9001
----------------	--------------

Features

System Capabilities

- Multi-speed motor for optimized performance
- Adjustable flow control
- Adjustable head pressure
- Closed-loop system compatible
- High-efficiency operation
