

Residential Landscape Design with Artificial Waterfall

This landscape design project covers 100,000 square meters. It features an artificial waterfall and rock formation as focal points within a residential area.

Project Overview

Residential Landscape Design Solution

This professional landscape design service specializes in large-scale residential environments, featuring integrated artificial water features and natural rock formations. The design philosophy focuses on blending aesthetic natural elements with modern urban architecture to enhance resident well-being. This solution provides a comprehensive approach to creating tranquil, visually appealing outdoor spaces within multi-story residential complexes.
