

Residential Solar Water Heater

This high-efficiency solar water heater is designed for residential use. It uses a vacuum tube collector for optimal heat absorption and includes a durable, insulated storage tank.

ADDITIONAL IMAGES

Product Overview

Sustainable Hot Water Solution

This high-efficiency residential solar water heater utilizes advanced evacuated tube collector technology to maximize solar energy absorption. The system features a durable, insulated storage tank designed to minimize heat loss and maintain temperature. Built with a corrosion-resistant frame, it provides a reliable, cost-effective, and environmentally friendly method for domestic hot water production.

Technical Specifications

Key Features

- High-efficiency solar absorption
- Insulated storage tank
- Corrosion-resistant frame
- Easy integration with existing plumbing
