

Residential Solar Water Heater System

This solar water heater system is designed for residential or commercial use. It uses evacuated tube collectors for solar energy absorption and includes an insulated storage tank.

ADDITIONAL IMAGES

Overview

Sustainable Hot Water Solution

This high-efficiency solar water heating system is engineered for reliable performance in residential and commercial settings. Utilizing advanced evacuated tube collectors, the system maximizes solar energy absorption to provide a cost-effective and environmentally friendly source of hot water. The design incorporates a well-insulated storage tank to minimize heat loss and is built with corrosion-resistant materials to ensure long-lasting durability across various climates.

Technical Specifications

Key Components

- Cylindrical storage tank
- Evacuated tube solar collectors
- Support frame

Performance Features

High Efficiency • Well-Insulated • Corrosion Resistant

Suitable Applications

Residential, Commercial, Multi-climate
