Product Overview

Advanced Residential Water Softener Control Valve

This control valve is specifically engineered for residential water softener systems, automating the regeneration process to ensure consistent water quality. It features a robust, corrosion-resistant construction designed for long-term reliability and seamless integration into home plumbing. With an intelligent electronic control board, users can easily program regeneration cycles based on time or water usage, optimizing both salt consumption and overall water efficiency.

Core Features

Operational Modes

- Down-flow regeneration
- Up-flow regeneration
- Proportionally Brine Draw
- Brine dry mode

Smart Capabilities

WIFI Remote Control, Vacation Mode, Intelligent Leakage Protection, Salt Shortage Alarm

Technical Specifications

Interface & Connectivity

- LCD Display
- Multi-language support
- Clip connection
- Chlorine disinfection connector
- Hard water bypass function

Connection Ports

Inlet • Outlet • Drain • Brine
