System Overview

Advanced Residential Water Softening

This state-of-the-art water softening system is designed to efficiently remove hardness minerals such as calcium and magnesium from residential water supplies. By preventing scale buildup in pipes and appliances, the system helps extend the lifespan of your household plumbing while providing soft, clean water for improved bathing and laundry. Featuring an intelligent control panel, it optimizes salt and water usage for environmentally friendly and cost-effective operation.

Intelligent Features

Smart & Intelligent Functions

- Remote control via smartphone
- Intelligent leakage protection
- Salt shortage alarm
- Vacation mode
- Brine dry mode

Performance & Technology

Technical Specifications

- Top-grade softening resin
- Brine refill using soft water
- Proportional brine draw and refill system
