

Residual Current Circuit Breaker 63A

Residual current circuit breakers protect against electrical shock and fire hazards caused by earth leakage faults. The devices disconnect the circuit when a leakage is detected.

Overview

Reliable Protection Against Earth Leakage

These residual current circuit breakers are engineered to provide robust protection against electrical shock and fire hazards resulting from earth leakage faults. Designed for versatility, they are suitable for residential, commercial, and industrial environments. The devices feature rapid disconnection capabilities to mitigate serious injury or equipment damage upon fault detection.

Key Metrics

Rated Current

63 A

Rated Current

0.03 A

Tripping Current

630 A

Residual Breaking Capacity

Electrical Specifications

Rated Voltage	240V~ / 415V~
Frequency	50 Hz

Configuration

Available Configurations

- 2-pole
- 4-pole

Applications

Suitable Applications	Residential, Commercial, Industrial
