

Resin Fiber Abrasive Discs for Angle Grinders

Abrasive resin fiber discs are designed for grinding, blending, and finishing applications on metal surfaces using angle grinders. They are available in various sizes and grit types to suit different material removal and surface preparation needs.

Product Overview

Professional Abrasive Solution

These resin fiber abrasive discs are engineered for high-performance grinding, blending, and finishing on various metal surfaces. Designed specifically for compatibility with angle grinders, they feature a center hole for secure mounting during demanding industrial tasks. The durable construction utilizes high-quality resin and abrasive grains to ensure extended tool life and consistent, professional results in construction and fabrication environments.

Technical Specifications

Material Composition

- Durable resin bond
- Abrasive grains
- Fiber backing

Application	Grinding, Blending, Finishing, Metal Preparation
Tool Compatibility	Angle Grinders
Mounting	Center hole

Industry Suitability

Suitable Industries

Industrial • Construction • Metal Fabrication
