

# Resin Fiber Grinding Discs

Resin fiber discs are abrasive tools for grinding, blending, and finishing. The discs have abrasive grains bonded to a fiber backing with resin, and are used with power tools for metalworking and surface preparation.

## ADDITIONAL IMAGES

## Product Overview

### High-Performance Resin Fiber Discs

These professional-grade resin fiber discs are engineered for heavy-duty grinding, blending, and surface finishing applications. Featuring a robust fiber backing bonded with durable resin, they offer superior heat resistance and aggressive cutting action on metal, wood, and composite surfaces. Designed for versatility, they effectively handle tasks ranging from weld removal and deburring to precise surface preparation.

## Performance Metrics

### Key Performance Attributes

**1 High**

Heat Resistance

**1 High**

Durability

## Technical Specifications

### Primary Applications

- Weld removal
- Deburring edges
- Surface smoothing
- Blending
- Stock removal

### Compatible Materials

Metal, Wood, Composites

## Design Features

### Construction Details

- Tough fiber backing
- Resin-bonded abrasive grain
- Contour-conforming flexibility

### Mounting Method

Central hole for angle grinders and rotary tools
