

Reverse Osmosis Membrane Element

This reverse osmosis membrane element is designed for water purification systems. It effectively removes impurities and contaminants from water, providing clean and safe drinking water.

Overview

High-Performance Reverse Osmosis Element

This reverse osmosis membrane element is engineered for efficient water purification in residential, commercial, and industrial systems. Designed to effectively remove impurities and contaminants, it ensures the delivery of clean, high-quality water. Its robust construction and high flux rate make it a reliable choice for consistent filtration performance across various water conditions.

Performance & Certification

Available Capacities

- 200 GPD
- 600 GPD
- 2800 GPD

Certifications

NSF Certified

Technical Specifications

Physical Dimensions

Parameter	Measurement
Length	298 mm
Body Diameter	51 mm
End Cap Diameter	50 mm
End Cap Thickness	21 mm
Connector Diameter	17 mm

Housing Compatibility

Standard membrane housing ROH-10B
