

Reverse Osmosis Water Purification Machine

This water purification machine measures 490*205*480mm and has a capacity of 78L/H. It features a multi-stage filtration system to remove impurities and contaminants.

Product Overview

Professional Grade Water Purification

This water purification machine utilizes an advanced multi-stage filtration system to ensure the delivery of clean, safe drinking water. Designed with convenience in mind, the unit incorporates pre-filtration, activated carbon, and reverse osmosis membrane technology to effectively eliminate contaminants and sediments. Featuring a compact footprint and an intuitive digital interface, it provides reliable performance and easy maintenance monitoring for daily household or office use.

Technical Specifications

Filtration Stages

- Pre-filtration
- Activated carbon filtration
- Reverse osmosis membrane
- Post-position activated carbon filter

Smart Monitoring

Digital Display, Water Quality Monitoring, Filter Life Tracker

Design

Design Type

Compact household design
