

Reverse Osmosis Water Purification System

This reverse osmosis system is designed for residential use, with dimensions of 370*205*456mm and a flow rate of 7.8L/H. It employs a multi-stage filtration process to remove impurities and provide clean drinking water on demand.

Product Overview

High-Efficiency Water Purification

This advanced reverse osmosis system provides a comprehensive solution for clean, safe drinking water on demand. Utilizing a multi-stage filtration process including sediment, activated carbon, and RO membrane technology, the unit effectively removes impurities, contaminants, and odors. Designed for ease of use, it features an intuitive digital interface for monitoring water quality and remaining filter lifespan.

System Performance

Filtration Stages

- Sediment Filter
- Activated Carbon Filter
- Reverse Osmosis (RO) Membrane
