

RF Module Collection for Broadcast Applications

Collection of RF modules designed for radio and television broadcasting equipment. Includes tuners, mixers and amplifiers with metal shielding, printed circuit boards, and connectors.

Product Overview

RF Module Collection for Broadcast Applications

This collection features a versatile range of RF modules specifically designed for radio and television broadcasting applications. The set includes high-precision components such as tuners, mixers, and amplifiers, all featuring robust metal shielding to ensure signal integrity. Engineered for reliability in demanding broadcast environments, these units provide clear signal input and output connectivity for professional installations.

Technical Specifications

Included Model Numbers

- DBS-MU027
- DBS-MU0403
- DBS-MU201
- DBS-SO041

Design Features

Metal Shielding • Printed Circuit Board • Signal Input/Output Connectors

Production Batch Dates

20090715, 20090514, 20090622, 20090515
