

# RG Series 75Ω Coaxial Cable

RG series 75Ω coaxial cables are designed for transmitting radio frequency signals. They feature a central conductor, insulation, shielding, and an outer jacket.

## Overview

### RG Series High-Performance Coaxial Cables

The RG Series 75Ω coaxial cables are engineered for superior radio frequency signal transmission with minimal signal loss. Featuring a robust construction of a central conductor, insulation, shielding, and a durable outer jacket, these cables are designed to meet diverse performance requirements. They are ideal for professional installations including antenna systems, satellite receivers, and cable television equipment.

## Technical Specifications

### Characteristic Impedance

### Cable Construction

- Central Conductor
- Insulation Layer
- Shielding
- Outer Protective Jacket

## Applications

### Common Applications

Antenna Systems, Satellite Receivers, Cable Television Equipment, RF Signal Transmission
