

RG59 Coaxial Cable

RG59 coaxial cable features a solid copper conductor, foam polyethylene insulation, braided shielding, and a durable PVC jacket. It is designed for transmitting radio frequency signals in applications such as CCTV, cable television, and low-power video connections.

Product Overview

Professional Grade RG59 Coaxial Cable

This high-quality RG59 coaxial cable is engineered for reliable radio frequency signal transmission. Featuring a solid copper conductor and foam polyethylene insulation, it ensures stable performance for critical low-power video and CCTV applications. Its robust braided shielding and durable PVC jacket provide excellent resistance to interference and physical wear, making it an ideal choice for professional cable television and video network installations.

Technical Specifications

Cable Type	RG59 Coaxial
Conductor Material	Solid Copper
Insulation Material	Foam Polyethylene
Shielding	Braided Shielding
Jacket Material	PVC

Application

Primary Applications	CCTV, Cable Television, Video Connections, Radio Frequency
----------------------	--

Performance

Key Performance Features

- Reliable signal integrity
- High resistance to electromagnetic interference
- Durable construction for long-term use
