

RG6U Coaxial Cable with 18/2 Power Cable

RG6U coaxial cable with 18/2 power cable is designed for transmitting radio frequency signals while providing power. It features a copper-clad steel center conductor, foam dielectric insulation, and aluminum braid shielding.

Product Overview

Integrated Signal and Power Transmission

The RG6U Coaxial Cable with 18/2 Power Cable is an all-in-one solution designed for demanding professional installations that require both radio frequency signal transmission and device power. This high-performance composite cable streamlines deployment by combining signal and electrical supply into a single run. Featuring high-grade shielding and durable insulation, it ensures reliable signal integrity while maintaining efficient power delivery to connected equipment.

Technical Specifications

Cable Construction	RG6U Coaxial, 18/2 Power Cable, Composite Cable
Shielding	Aluminum braid shielding
Center Conductor	Copper-clad steel
Dielectric Insulation	Foam

Power Characteristics

Power Conductor Gauge	18 AWG
Number of Conductors	2
