

Rib Fabric Needle Loom

This rib fabric needle loom is a specialized machine for producing rib fabrics in the textile industry. It features precise needle mechanisms and advanced control systems to ensure efficient, high-quality production.

Overview

Industrial Rib Fabric Production

The Rib Fabric Needle Loom is a high-performance machine engineered for the efficient production of specialized rib fabrics. Featuring a robust frame and precise needle mechanisms, it is built to handle various synthetic raw materials across broad manufacturing widths. With advanced tension control and integrated safety systems, this equipment is ideal for high-volume textile environments requiring consistent quality.

Technical Specifications

Key Performance Metrics

10004 n/min

Needle Frequency

5000 n/m

Needle Density

35 mm

Needle Stroke

Supported Raw Materials

PET, PP, Synthetic Fiber

Fabric Dimensions

2400-5600 mm working width

Fabric Weight

200-1000 gsm
