

Rice Cooker Lid Replacement Mechanism

This is a replacement lid mechanism for electric rice cookers. The assembly ensures proper sealing and safe operation during the cooking process.

Product Overview

Precision Lid Replacement Mechanism

This replacement lid mechanism is engineered for electric rice cookers, ensuring consistent sealing and safe operation during the cooking cycle. Featuring a robust metal mounting plate and integrated spring-loaded latching components, this assembly reliably controls lid opening and closure. It serves as an essential maintenance component to restore the functional integrity and safety of commercial or residential rice cookers.

Technical Details

Key Components

- Metal mounting plate
- Spring-loaded latch
- Integrated lever system
- Mechanical gears

Construction Materials	Metal, Durable Plastic
Primary Function	Regulates lid opening, closing, and pressurized sealing
