

Rice Polishing Machine

This rice polishing machine is designed for efficient and consistent rice polishing. It features robust construction, adjustable polishing intensity, and a high throughput capacity.

Product Overview

Advanced Rice Polishing Technology

This high-performance rice polishing machine is engineered to meet the demanding requirements of commercial rice processing operations. Featuring a combined high-wearable polishing cylinder with a sophisticated multirib and subsection structure, it ensures consistent and efficient results. The machine utilizes subsection sieves of varying specifications to achieve a high degree of polish, delivering rice with a brilliant, lucent surface finish.

Technical Specifications

Polishing Cylinder Type	High wearable cylinder with multirib and subsection structure
Sieve Configuration	Subsection sieve with varied specifications

Application

Target Environment	Commercial Rice Processing, High-Throughput Milling, Industrial Grain Finishing
--------------------	---

Performance Features

Output Quality
High Polished Degree • Lucent Surface Finish • Uniform Appearance
