Overview

High-Efficiency Ride-On Concrete Finishing

This ride-on concrete power trowel is designed to significantly reduce labor intensity while increasing construction efficiency by 5 to 8 times compared to ordinary walk-behind machines. Featuring a dual-cutter system, it provides superior ground compaction and increased road surface density. The machine is engineered for single-person operation, making it a cost-effective solution for large-scale concrete leveling and finishing projects.

Technical Specifications

Power System

World-famous brand engine providing strong and reliable power

Control System

Mechanical steering operating system for quick response and flexible control

Operational Features

Standard Equipment

- Dual lifting discs for quick cement slurry extraction
- Integrated water tank with spray nozzle
- High-intensity lighting for low-light operation
- Comfortable operator seating
- Safety switch and throttle control
- Diamond plate platform for secure footing

Operator Controls

Control Levers, Water Spray Button, Throttle, Lifting Rod

Safety & Durability

Safety Compliance

Protective Blade Cage • Emergency Safety Switch • Non-slip Diamond Plate
