

# RO Membrane Housing for Water Purifiers

This RO membrane housing is designed for household water purification systems. It provides a secure enclosure for the reverse osmosis membrane, ensuring efficient and effective water filtration.

## ADDITIONAL IMAGES

## Product Overview

### Professional RO Membrane Housing

This high-quality RO membrane housing is engineered specifically for household water purification systems. Constructed from durable, food-grade plastic, it offers excellent resistance to corrosion and chemical degradation while ensuring a secure, leak-proof environment for your reverse osmosis membrane. Its robust design is built to withstand high operational pressures, providing a reliable and long-lasting filtration solution for residential applications.

## Technical Specifications

### Key Features

- Corrosion resistant
- Leak-proof design
- High-pressure tolerance
- Easy installation and maintenance

<b>Material Composition</b>	Durable food-grade plastic
<b>Application</b>	Residential, Household Water Purifier
<b>Compatibility</b>	Standard household RO membranes
