

Road-Rail Vehicle with Crane

This road-rail vehicle is a specialized piece of rail transit engineering equipment. It is designed for both road and rail operation, allowing for versatile use in construction, maintenance, and repair of railway infrastructure.

Product Overview

Versatile Rail Maintenance Solution

The TGC-2 road-rail vehicle is a specialized engineering solution engineered for seamless transition between road and rail environments. Equipped with an integrated crane, it provides significant lifting capabilities for heavy infrastructure components. This versatile machinery is essential for the construction, maintenance, and rapid repair of railway networks, ensuring efficient and safe operations in diverse settings.

Key Features

Operational Capabilities

Road Operation, Rail Operation, Infrastructure Maintenance, Construction Ready, Heavy Lifting

Equipment Details

Transport Capacity

- Operator cabin
- Personnel transport capability
- Equipment transport capability

Crane Functionality

Yes
