

Roast Plant Heating Element

This circular heating element is designed for roast plant applications. It provides consistent and efficient heat distribution for roasting processes.

Product Overview

Industrial Heating Solution

This circular heating element is precision-engineered for roast plant applications, ensuring consistent and efficient heat distribution during roasting processes. Built with high-durability materials, it is designed to withstand extreme temperatures and the rigors of continuous industrial use. The component features standardized electrical terminals for reliable, easy integration into existing roasting equipment.

Technical Specifications

Heating Shape	Circular
Application Environment	Industrial Roasting, High Temperature, Continuous Duty

Connection and Build

Construction Highlights

- High-temperature resistant materials
- Durable industrial-grade construction
- Optimized for consistent heat distribution

Connection Type	Electrical Terminals
