

Rock Drilling and Piling Machinery

This robust mineral machinery is designed for heavy-duty rock drilling and piling operations in the mining industry. It is equipped with a powerful drilling hammer and associated hydraulic hoses, ensuring efficient and precise rock penetration.

Overview

Heavy-Duty Drilling and Piling Solution

This robust mineral machinery is engineered for demanding rock drilling and piling operations in mining and construction environments. Featuring a tall, high-strength steel frame and a powerful hydraulic drilling hammer, it offers the precision and force required for deep foundation work and mineral extraction. The unit is mounted on a mobile platform, ensuring flexibility and ease of relocation across various project sites.

Technical Specifications

Drilling Mechanism	Hydraulic hammer with heavy-duty cable lift system
Frame Construction	Reinforced steel, vertical support design
Mobility	Yes

Application

Primary Applications	Rock Drilling, Piling, Mining, Deep Foundation Construction
----------------------	---

Key Features

Performance Highlights

1 Mobile Operational Mobility	1 Yes Heavy-Duty Capability
