

Rock Drilling and Piling Machinery

This machinery is specifically designed for rock drilling and piling tasks in mining operations. It utilizes pneumatic or hydraulic power and features a robust construction suitable for demanding environments.

Overview

High-Performance Rock Drilling and Piling Machinery

This robust drilling and piling machinery is engineered for demanding mining and construction environments. Featuring a heavy-duty design, it supports both vertical and angled drilling applications with precision. Equipped with advanced drill head and control mechanisms, it offers the reliability needed for complex excavation and foundation tasks.

Technical Specifications

Drilling Angles

- Vertical Drilling
- Angled Drilling

System Type

Pneumatic • Hydraulic

Application Compatibility

Mining Operations, Construction, Piling, Rock Drilling
