

Rock Drilling Machinery Frame

This frame is designed for construction machinery used in rock drilling and piling operations. Its sturdy construction provides stability and support for heavy-duty tasks.

Overview

Robust Drilling Support

This rock drilling machinery frame is engineered for high-demand construction and piling operations. Featuring a reinforced design with a central opening, it provides the necessary stability and load-bearing capacity for heavy-duty drilling equipment. Its high-visibility yellow finish ensures safety and easy identification on busy construction sites.

Technical Details

Structure Feature	Welding
Applicable Conditions	Used with the catheter
Primary Application	Rock Drilling, Piling Operations, Foundation Work

Design Features

Safety and Visibility

High Visibility Finish • Reinforced Structure
